Hi Koldo

We just got back tonight as something came up and had to get back early.

That is strange, I have not seen that error before.
I will look at that tomorrow.

Here is a .zip of ntile and also the GUI NLN_tile where ntile is included.
<http://www.nlneilson.com/apps/01.zip>

Here is how it is tied in:

```
void Work(){
FileOut out("nt.bat");
if(!out) {
    Exclamation("Unable to open [* " + DeQtfcfgfile));
    Break();
}
out.PutLine("call cd C:\\0-Neil\\FAA\\2011\\Sectionals");
// out.PutLine("call ntile.exe tile --lztst 10.0 --wwcache --overviews 0nt5 LA_clip.tif"); // 2
// out.PutLine("pause"); // 2
out.Close();
system ("nt.bat");
ntile(????????);
```

It took me a while to figure this out:
#include "ntile.cpp"

ntile.exe has been working OK and when nt.bat is made it works with the GUI, here I just hard coded the data in the nt.bat file, renamed main in ntile.cpp to ntile and commented the argv hard coded in ntile.cpp and un commented this line:

```
out.PutLine("call ntile.exe tile --lztst 10.0 --wwcache --overviews 0nt5 LA_clip.tif");
```

I have not figured out how to pass the argv from the GUI to the ntile function.
