Lance wrote on Sun, 12 June 2011 21:59: Never mind. v8 might not be right for my situation. I need a scripting language that can call external library functions, eg, a function written in C++ in the host program. Doesn't v8 provide mechanism to interface at least `_cdecl` functions? Can you provide some example. That would be truly interesting and useful.

kohait's python package may be able to do that.

You can do this in c++ and wrap into v8. this is done in v8cgi, node.js. I planned to do too.

I will keep you informed when I done this part of job.
