re: question #2, maybe I will put
a zip file in the
Bazaar.

It will be a working port to Mac OS X:
with the runnable binary of theide,
the archive libraries,
a readme, and changed files.

Later, I will try out SVN and
see if I can do a merge into it.

There is more work needed to make
this a Mac application and runnable by clicking
from the Finder. For now, one must
run it from the shell:
~/theide

(which isn't so bad since users are programmers).
