I had a similar issue as this.
In dlg.lay it looked OK.
When the app was run the EditField was about 6 times as high as it should have been, 3 up/down, that was white but the text was where it should be.

I just spent a bunch of time deleting that field, replacing, changing location, etc.. It just happened when it was in the third row down.

That was about 3 or 4 months ago, maybe the U++ update fixed it as there has been no problems since then.
