Hi, are you still working on U++ in Xcode?  
Is it a completed U++ port for MACOSX?

Does your version bypass the X11 and  
instead use native UI (Quartz or Cocoa?)

I starting from the trunk source, and  
I had success building theide from the  
command line with gcc. It runs OK on MAC OSX  
version 10.6.7 on an iMac. I only changed  
the makefile a bit, and a few config files.

I still need to make some minor changes to get  
the proper settings for build to work (but I can  
build apps from the command line now and they do run).

The result I get is not "proper" Mac apps;  
they do not run from Finder, but work from the  
command line. I will look into this.

I have not tried your U++ version or building  
U++ inside of Xcode.

Thanks,

Dave
