Hi Jibe,

Please find attached files showing a basic application using a sqlite3 database named "cookbook.db" I am using in one of my projects. The files include pictures of the main window showing the 2 droplists and the editString before clicking the "Search" button and after having chosen the table field "NAME" and the ailment to identify ("tomate") and clicked the button "Search". The doc file is the source code (h,cpp and database schema). I prefer to use Sqlld as often as possible and did that way in this example.

Hoping this could ne helpful

Let me know

have a nice week-end
