patch0 has some fixes concerning PLATFORM_X11, which should be GUI_X11 or PLATFORM_POSIX now, please review it. there also arises a slight problem with Image, it still has some code PLATFORM_WIN32 and PLATFORM_X11 dependant. but due to elimination of PLATFORM_X11, which is available from Core level, GUI_X11 is available from CtrlCore level only, Image, which is included by CtrlCore does not know anything from GUI_X11. i dont have any solution for this. maybe the platform dependant stuff should be made a special class, which is implemented platform dependantly.

OK, sorry. Will deal with this soon...
