Subject: How to highlight particular tab when corresponding button is clicked
Posted by Monty.mvh on Wed, 06 Jul 2011 05:53:14 GMT

Hi friends,
 I have 5 tabs and each tab has its own button..
When a particular button is clicked ,corresponding tab has to get opened and set..But problem is am able to open the tab by clicking the button but only tab 1 is getting highlighted while other tabs after opening thru respective buttons remain in the background...

What is the function i need to call to set particular tab when corresponding button is clicked...
