Subject: Re: Core: Null handling incoherent?
Posted by kohait00 on Thu, 07 Jul 2011 08:35:08 GMT

i dont encounter the changes too big, since the standard inline template assigns Null. it merely enables to override the means since for there are cases (like the complex, which we gladfully managed to solve in another way), where you neither can change the class (or dont want to) nor can you add a operator Foo() to Nuller. in those cases you specialize SetNull. to at least be able to use it with RichValue..

please reconsider it. it does not change any semantic.. =Null assignment is still the default..but it offers means to intercept..

what would be the full way solution?
