Subject: Re: umk is a virus! according to avira
Posted by dave on Sun, 17 Jul 2011 13:56:40 GMT

avira antivir products uses hueristic analysis to detect malware, which antivirus product does'nt.

this is a false alarm, thats for sure.

i think the developers of UPP should take up this matter with the antivirus companies and clear up the issue.

a very nice product like UPP should not have any bottlenecks whatsoever. it may deter some windows platform developers from using such a wonderful product.
