forlano wrote on Sat, 20 May 2006 08:23Hello,

in my toolbar I've added an editstring. In it I want to show the filename currently in use. I know the status bar is better place for this but I want save space in my page.

First I engaged a terrible struggle with the editstring that appeared microscopic. When I lost the hope I've found a hint on the forum:

bar.Add(edts, edts.AddFrameSize(200,15));

and I won the battle.

But then I lost the war because it refused to adjourn its content. I mean it is unsensitive to the command <<= like in this snippet:

```
void VegaTab4::Load(const String& name)
{
  editor.Set(LoadFile(name));
  //edts <<= name;  //doesn't work
  //edts.SetText(name); //doesn't work
  edts <<= "prova";  //doesn't work
  editor.ClearModify();
}</pre>
```

So, is it possible to send a string in the editstring embeded in a toolbar? Luigi

PS: the editstring is seteditable to false, but it doesn't work even it it set to true.

This works:

```
#include <CtrlLib/CtrlLib.h>
struct MyApp : TopWindow {
   EditDate date;
   ToolBar toolbar;

void Set() {
   date <<= GetSysDate();
}

void Tool(Bar& bar) {
   bar.Add("Test1", CtrlImg::paste(), THISBACK(Set));
   bar.Separator();</pre>
```

```
bar.Add(date, 300);
}

typedef MyApp CLASSNAME;

MyApp() {
  AddFrame(toolbar);
  toolbar.Set(THISBACK(Tool));
  Sizeable();
};

GUI_APP_MAIN
{
  MyApp().Run();
}
```
