Try to make symbolic link to libstdc++/so which name is libstcc++.so.5

Thanks for the reply,  
After (maybe I did a mistake)

In -s libstdc++.so.6 libstdc++.so.5

I got

```
vega@ubuntu:~/upp-linux386-605$ ./theide
./theide: /usr/lib/libstdc++.so.5: version `GLIBCXX_3.2' not found (required by ./theide)
./theide: /usr/lib/libstdc++.so.5: version `CXXABI_1.2' not found (required by ./theide)
```

Any other idea?  
Luigi
