Hello.
I have started study u++. And faced with 2 problems.
1. When I sorted column in ArrayCtrl pressing heading - numbers are sorted by increase/decrease. But when I sorted russian letters - its sorted not by an order.Have solved a problem or not?

2. For closing of my program I cause function

```
{

 {
  SaveXML();
  Close();
 }
}
```

But when I cause this function from tray:

```
void PB::trayMenu(Bar& bar) //right click
{

}
```

The program keeps the dataSaveXML();, but isn't closed Close();
When I close the form the program is closed correctly.
I don't understand in what a difference
P.S. Sorry for my English.
