Hello.

I have started study u++. And faced with 2 problems.

1. When I sorted column in ArrayCtrl pressing heading - numbers are sorted by increase/decrease. But when I sorted russian letters - its sorted not by an order. Have solved a problem or not?

2. For closing of my program I cause function

```
{  
{  
SaveXML();  
Close();  
}  
}
```

But when I cause this function from tray:

```
void PB::trayMenu(Bar& bar) //right click
```

```
{
```

```
}
```

The program keeps the dataSaveXML();, but isn't closed Close();

When I close the form the program is closed correctly.

I don't understand in what a difference

P.S. Sorry for my English.
