## Hello.

I have started study u++. And faced with 2 problems.

- 1. When I sorted column in ArrayCtrl pressing heading numbers are sorted by increase/decrease. But when I sorted russian letters its sorted not by an order. Have solved a problem or not?
- 2. For closing of my program I cause function

```
{
    SaveXML();
    Close();
}
But when I cause this function from tray:
void PB::trayMenu(Bar& bar) //right click
{
```

The program keeps the dataSaveXML();, but isn't closed Close(); When I close the form the program is closed correctly. I don't understand in what a difference P.S. Sorry for my English.
