Hello Shwetha

I do not understand you very well.

However you can try this and we can modify it to get what you need:

```
grid.AddColumn("Data");
String data = LoadFile(AppendFileName(GetDesktopFolder(), "test2.log"));
for (int row = 0, ind = 0; true; row++) {
    int endLine = data.Find('\n', ind);
    if (endLine == -1)
        endLine = data.GetCount()-1;
    String rowText = data.Mid(ind, endLine-ind);
    ind = endLine+1;
    if (rowText.IsEmpty())
        break;
    grid.Set(row, 0, rowText);
}
```
