In WhanAcceptRow callback use `grid.CancelAccept()`

Thank you, it works (permit me to continue to edit the row and correct it) but how to accept the row and set `cancel_accept` to false? I cannot move to another row to edit and the application cannot be closed.

I tried `grid.Accepting()` but no result.

thanks,

Luigi

EDIT: I was silly... just

```
grid.cancel_accept=false;
```

at the end of the callback do the job!
