raxvan wrote on Tue, 23 August 2011 04:52Hello,

Is there any functionality for this? Search files in packages and open?  
I'm asking because i find this feature very usefull Visual assist, and i'm thinking to try an implementation.

Thanks,  
Raxvan.

Not sure if I undrestand, but there is "Find in files" and you can doubleclick locations you have found... Or press F4.
