Hi,
I have a question regarding saving users configurations as xml from Ctrls.
for example-

```
xml <<
 XmlHeader() +
 XmlTag("Phonebook")
(
    XmlTag("Name").Text(panel1.droplist1.GetData())+

    XmlTag("Address").Text(panel1.editfield1.GetData())+

    XmlTag("Phone").Text(panel1.editfield2.GetData())
};
```

what is the best way to xmlize configurations from switches and options ctrls?

regards
dave
