Monty.mvh wrote on Wed, 24 August 2011 07:40Hi friends,

I have developed a GUI which contains schema fie and multiple .cpp files...
I usually get an error only on second compilation and afterwards..
I know its a problem in header file but how to sort out this....

The error is.....

/Test1.sch:55:multiple definition of `TABLE_INFO_1(Upp::SqlSchema&)'

$blitz.o:/root/upp/MyApps/Test/Test1.sch:3: first defined here
.
.
./Test1.sch:55: multiple definition of `TABLE_R_FACEGRID(Upp::SqlSchema&)'

/$blitz.o:/root/upp/MyApps/Test/Test1.sch:55: first defined here
.
.
.
.

.
.
.
.

This runs multiple lines....

With regards
Mahanthesh

Most likely the problem is that you have put "sch_source" include into the header - it has to be in some .cpp file.

The reason why it produces the error only sometimes is BLITZ - it tends to hide this kind of issues.
