mdelfede wrote on Sat, 10 September 2011 16:05Maybe something added to Array class :

```
void Swap(int i, T*&ptr) { T *tmp = ptr; ptr = vector[i]; vector[i] = tmp; }
```

I'd need for ArrayMap too... I wonder if it's automatic or not, adding it to Array class.
Will try....

Max

Interesting idea. Not yet sure whether I like it, but maybe this would make it nicer:

```
T *Replace(int i, T *ptr) { T *tmp = vector[i]; vector[i] = ptr; return tmp; }
```
