mdelfede wrote on Mon, 19 September 2011 21:16Hi all

Fudadmin : the problem is *not* how to do it with your code, is to import external libraries without patching them, if possible.
As I said in my post, GUARDS ARE NOT INCLUDED inside those library files.

Max

Sorry, Max, I didn't understand from your question. The word "external" was not mentioned.

Recently myself I was dealing with this kind/similar problems by writing bash-sed-awk scripts to automatically create upp packages to manage archlinux PKGBUILDS.
another posiblity is to write usc macros.

But, yes, I agree, more flexibility and options would be good. So we can conclude that the current packages build system doesnt allow "Excluding files from build depending on flags" and this topic should go to a wishlist section?
