
Subject: NTL_MOVEABLE and other namespaces

While working with Irrlicht, I had to use some structures with Vector and trying:

```
NTL_MOVEABLE(irr::video::S3DVertex);
```

Causes compilation errors.

The solution is to use explicit namespace structure:

```
namespace irr {  
    namespace video {  
        NTL_MOVEABLE(S3DVertex);  
    }  
}
```

Just though that this might be a tip for some people working with third party libraries, especially since the behavior is not identical in MSC and GCC.
