Hi,

In Fedora the Style() function is not accessible in TopWindow class, and

MaximizeBox().MinimizeBox() lose effect in child window. Sizeable() still takes effect.

By the way, installation in Fedora have a minor problem. 'make install' can not select /usr/local as the default installation path, and --prefix=xx is not accessible, so 'theide' is copied to the directory of the extracted source code(in my computer it is home/<myname>/Download/upp-x11-src-3550/uppsrc).

Best regards,
