I congratulate you for this initiative.

I vote for:

- 1.- theide: Windows 64-bit debugging support. Remark: I think the debugger still contains some minor bugs;
- 2.- theide look&feel improvements (docking, new icons...);
- 3.- configurable menu bar: a great improvement, certainly;
- 4.- Multi threading for Painter: would it be possible to implement something similar fot GLCitr?.

Best wishes.

Thanks,

remark: somehow, my last post didn't work, that's why is empty.

Javier
