is there any short-hand for something like this:

```
Array<int> ints;
String str = "";

... - adds some elements to 'ints'

for(int q = -1; ++q < ints.GetCount(); ) {
    str += AsString(ints.[q]) + " ";
}
```

?

excluding
`for(int q = -1; ++q < ints.GetCount(); str += AsString(ints.[q]) + " ");`
