is there any short-hand for something like this:

```
Array<int> ints;  
String str = "";
```

... - adds some elements to 'ints'

```
for(int q = -1; ++q < ints.GetCount(); ) {  
    str += AsString(ints.[q]) + " ";  
}
```

?

excluding

```
for(int q = -1; ++q < ints.GetCount(); str += AsString(ints.[q]) + " ");
```
