If he uses a utf8 editor he will be able to see the characters correctly (I assume utf8 is your default). Under linux it is very easy to found such a editor.
Another possibility is to send him the whole theide with the tyranslation.t. Theide will be used as editor.

Ciao,
Luigi

Uhmmmm.... I loaded .t into an utf8 editor, but special chars are replaced with \xxx codes, so I guess is something inside .t files, not an editor problem....
