Now I can get translation to work. In LangInfo.cpp there are defs of Indian scripts. I added these in "t.h" file.

mrIN, knIN, saIN ... about 10

with this change I can now use .t file. My modified t.h file enclosed.

I modified Honza's example file hello.cpp. When I set explicitly the default font with Draw::SetStdFont function the button text rendering is OK. But without this setting button text is not rendered properly.

Both cases Title is correctly rendered. I am using TheIDE-4085 on windows 7.

Any suggestion for getting it right.

Thanks.
