Hi cbpporter,

Thanks for response

I am not looking for correct rendering of Indian scripts in TheIDE. I want it right in my running Application.

In my application display I want to have Indian fonts. So if I change correct default font I am getting correct rendering on windows. It is working with .t file also with on the fly display changing. I want to test it with .tr file.

When I compile the same code on Ubuntu with Draw::SetStdFont it is not rendering properly.

I want some hints on what needs to be done. DrawText renders correctly on windows but not on Ubuntu. But same strings display properly in Emacs and gedit in ubuntu without font settings.
