I will let you know how I am doing as soon as I know a bit more.
Conrad

I understand the concept of Packages a bit better now.
I made a "DotNetWrapper" package with -clr.
It looks like I need a way to pass on more compiler options to VS.
In particular the /MDd option must override the /MTd option.
(Adding -EHa seems to work, but adding -MDd doesn't)

I am using the HelloWorld example.
I don't think I need to change the default setting of the application. Only the wrapper package
must be build with correct options.

I have read Miroslav's http://www.ultimatepp.org/redmine/issues/156 and looked at the diffs but
that is going a bit too fast for me Besides, looks like I would have to recompile theIde first after
pull in those changes.

Regards,
Conrad
