Python web frameworks. I also don't see of what use C++ would be in web development.

Well, we already have most of technology ready. We have much stronger DB iface that would ever be possible in Python.

The endpoint for U++/web is that we are able to create more compact, more reliable and more easily deployable web apps, running about 20x faster than with Python. I believe it is worth the try...

BANZAI!

I have stopped to program in PHP and waiting the day I can deploy the app in U++.
