Wolfgang wrote on Sun, 20 November 2011 14:22Hi,

is it possible to extend the methods of a StaticText widget to have additional to the "SetText(const char *text)" a method that ADDS text instead of resetting it?

AddText for example.... "AddText(cont char *text)", can you tell me how to extend it, if possible? (I'm really sure it is possible)

Thank you!

Why not just use

lbl.SetText(lbl.GetText() + add);

?
