BTW, a question.... I still don't understand the timing with RTIMING macro... could you explain a bit more the results ?

For example, what are the 197 ms for fully interpreted and the 770 ms for interpreted ?

Hello, Massimo.

RTIMING is profiling macro for source code scopes. In this case for:

```
{
  RTIMING("Interpreted");
  double sum = 0;
  // ...
  RDUMP(sum);
}
// ...
{
  RTIMING("Squirrel (fully interpreted)
  using namespace Sqr;

  double sum = 0;
  // ...
  RDUMP(sum);
}
```

RTIMING writes results to application *.log file, even in Release mode. TIMING for Debug.
