OK, in the next 6 months or so I am going to create U++ based web framework.

I would also like to see:

- theide: Windows 64-bit debugging support [w]
- theide look&feel improvements (docking, new icons...) [m]
- Google NaCl support in theide(IMO, this one would be big for U++) [m]
- ipv6 support [d]

but let us consider them 'optional', volunteers needed....

With web I am pretty sure now we can deliver...
