## Subject: Bug in AllForI18n - copy & paste kills TheIDE
Posted by Wolfgang on Fri, 25 Nov 2011 17:32:48 GMT

Hi there,

today I translated some text from english to german language (the overview file with pictures in it...)

To check the spelling with an external tool I simply wanted to copy the whole content of the .tpp file (opened it in theIDE with the AllForI18n package <ctrl> + a and <ctrl> + c) and insert it in MS Word (2010) (<ctrl> + v) - windows tells me immediately that theide doesn't response any more. If I close it the content that I tried to insert appears in Word...

Looks like a bug for me?!

Sorry, don't know where to post this - so it is here.

best regards,
Wolfgang
