Subject: Custom build steps upgrade

Getting ready for W++ development, I decided that we need something to move "website related" (based on extensions) files from package to .exe directory.

A good candidate was "Custom build steps", so I have upgraded it to achieve this task by adding embedded "cp" command and a couple of new variables.

The required task can now be achieved by

cp $(PATH) $(EXEDIR)/$(PACKAGE)/$(RELPATH)

List of actual Custom build steps features is available in its definition dialog in theide...
