Getting ready for W++ development, I decided that we need something to move "website related" (based on extensions) files from package to .exe directory.

A good candidate was "Custom build steps", so I have upgraded it to achieve this task by adding embedded "cp" command and a couple of new variables.

The required task can now be achieved by

```
cp $(PATH) $(EXEDIR)/$(PACKAGE)/$(RELPATH)
```

List of actual Custom build steps features is available in its definition dialog in the ide...
