It would be nice to have something like this in U++: <http://qtwui.sourceforge.net/>

Even better if we can use the same U++ code and layout editor as with normal widgets and just use a switch like "#define webUI".

With this feature we could have Web interfaces for our applications. Similar to what qBittorrent app does, allowing the user to also control the interface by accessing: <http://IP:8080> from another computer.

Thanks
