Wolfgang wrote on Sat, 26 November 2011 16:40is it possible to hide the non-printing control characters in t++? (like paragraph or space chars)

Yes there is a trick for that In the editor, there is a little wrench icon on the right side, where ruler meets the scrollbar. Here you can set a color of the non-printable characters. If you set it to transparent, they will disappear

Wolfgang wrote on Sat, 26 November 2011 16:40and is it possible to zoom in it (because on my notebook where's such a small screen)?

Zoom setting is in the very same dialog. Unfortunately, it works only the other way, making things smaller. Maybe this could be changed, I would like to be able to zoom in as well, as I often use theide on 10" display
