luzr wrote on Thu, 25 May 2006 22:51 Please try this fix:

CtrlLib/CtrlLib.usc, line 328:

```
ctrl Option {  
    group "Push";  
  
    Text SetLabel ? @1 "Option text";  
    >Base;
```

(the difference is "@1", which moves that method "to the right" after ThreeState etc...)

Mirek

Yes, it works. Now I get the sequence
ITEM(Option, oMyOption, ThreeState(true).SetLabel(t_("my option")).LeftPosZ(60,
68).TopPosZ(16, 15))
That seems better as threestate works immediatly without workaround.
