mirek wrote on Fri, 02 December 2011 13:13What about EXEPATH, EXEDIR, EXEFILE instead?

OUT* is tied to "current file", which is problem for "phony" filename...
If I understand you correctly, EXEPATH,EXEDIR,EXEFILE doesn't fit here, because I wish to copy output binary to some directory inside my project sources directory.
I.e. project resides in "f:/SOURCES/Silos" direcory.
And there is "f:/SOURCES/Silos/TEST_OUTPUT" directory where we keep a number of config files and data. So I wish that a new binary is copied there as automatic build step. The problem is TheIDE doesn't understand $(PROJECT) macro and custom post-link command cp $(EXEPATH) $(PROJECT)/TEST_OUTPUT is executed by TheIDE as cp C:\upp\out\PROJECTS\MSC9.Debug.Debug_Full.Gui.Io.Mt\Silos.exe /TEST_OUTPUT
