OUT* is tied to "current file", which is problem for "phony" filename...
If I understand you correctly, EXEPATH,EXEDIR,EXEFILE doesn't fit here, because I wish to copy output binary to some directory inside my project sources directory.

Ah, I see, sorry. For me it is from project to output binary dir...

I guess there is a little problem, as there can be more than single assembly. But perhaps a macro for FIRST assembly folder would do?
