Here I'm running Windows 7...

Am I right that

Quote:<http://dev.mysql.com/downloads/>

Quote:Connector/ODBC(Current Generally Available Release: 5.1.9) Standardized database driver Windows, Linux, Mac OS X, and Unix platforms.

is the ODBC Layer which provides less performance than the

Quote:Connector/C++(Current Generally Available Release: 1.1.0) Standardized database driver for C++ development.?

I saw the docs but in it it's nothing what I need to download..

the connection to a local server differs just by local = "localhost" or "127.0.0.1" and the remote is connected through the full http / network path?!
