Is this sufficient explanation?

well it fails to explain why it was decided to make it 100 times more complicated for no apparent gain but I guess I'm unlikely to get an answer on that one so I'll focus on why does the output path (which I fully specified) not get interpreted? How is that ":" sign used? Why is the build method not part of the syntax and and why isn't any of this in the documentation?

For starters

Nick
