Hi,

forlano wrote on Thu, 08 December 2011 18:31 Perhaps it is matter of Convert function that should be associated with this ctrl.

Thanks for your suggestion ! In fact, it's no need to use the convert function in my case, as the droplist is not in an SqlArray.

In fact, the problem was the initialization of the DropList : Adding the strings of the list must be done before setting the value ! I did not pay attention that it was done after in my case !
