
Subject: Re: umk got changed....

Posted by [nixnixnix](#) on Tue, 13 Dec 2011 00:23:46 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hey Honza,

In the default Windows install, umk.exe is in the same directory as theide.exe and the .bm files and the .var files so as I understand what you wrote, my batch file should work without any modification. Also, that ":" I think should be a ";" no?

However, lets try a little harder and I'll try for once to stop being a whingeing Brit . How about if I try something like

```
D:\Probuilds>c:\upp\umk.exe d:\AWSopenWind\trunk;c:\upp\uppsrc OpenWind c:\upp\MSC10x64
-a1ev +PRO,GUI,MT,OCOE,CLIENT_WORP d:\Probuilds\WORP\openWind64.exe
```

that ought to work right? We're not assuming anything now. All paths are provided. I think you're in for a surprise....

Inline assembly: D:\Probuilds\d;D:\AWSopenWind\trunk;c;D:\upp\uppsrc

Output directory: c:\upp_out

Main package: D:\AWSopenWind\trunk\OpenWind\OpenWind.upp

Build method: c:\upp\MSC10x64.bm

```

There were errors. (0:00.62)

```
D:\Probuilds>pause
Press any key to continue . . .
```

unfortunately, in making this more Linux friendly, it appears it is no longer Windows compatible.
See how the ":" gets interpreted?

So, I am more and more confident of my original assertion that this is broken.

What say you?

Nick

p.s. also, did you see how the output directory is completely ignored? This is not good. If all the
exes get written to the same place, what use is batch?

p.p.s you can get around the ":" problem by writing something like

```
c:\upp\umk.exe "\AWSopenWind\trunk":"\upp\uppsrc" OpenWind c:\upp\MSC10x64 -a1ev
+PRO,GUI,MT,OCOE,CLIENT_WORP \Probuilds\WORP\openWind64.exe
```

which makes things clearer but gets the same result.

More info: I was impressed that umk managed to work out which disk was being used but I was
giving it way too much credit. If I run the above line from inside C:\upp I get

```
C:\lupp>c:\lupp\umk.exe \AWSopenWind\trunk:\lupp\uppsrc OpenWind c:\lupp\MSC10x64 -a
1ev +PRO,GUI,MT,OCOE,CLIENT_WORP \Probuilds\WORP\openWind64.exe

Will the old umk.exe work with the new theide.exe ? If no-one who can fix it has Windows and the old version worked perfectly under Windows, it makes sense to just use the old version right?

OK, the old umk.exe (from 3211) wont work with the latest UPP
