Well, I see the point of the refactoring helpers now. Thanks for enlighting me

Sadly, I have to admit TheIDE doesn't have that. Maybe an idea for future development. But as you noticed, some pretty large projects have been done with it but nobody really asked for such functionality. Maybe it is because with the fast rebuilds (thanks to blitz) it is really easy to change one thing in definition, hit F5 to rebuild and then just go through the errors (F4) which will exactly show you all the places where the appropriate changes must be done as well. It sound like middle-age technology compared to the stuff in your links, but I guess it is what we all use and we are happy about it

Honza
