But that is just the most common solution. Nothing prevents you to create the schema in release mode.

Mirek

Thanks. One more question please.

I commented `#ifdef` and `#endif` and compiled in "optimal mode".

The compiler answered with

error C3861: 'All_Tables': identifier not found

Why in debug mode it does not complain about 'All_Table'? Perhaps some include is not set properly in that reference case but I can't fix it.

Thanks again,
Luigi
