Hi Luigi,

I'm glad you found it useful

I'm using it in my application, because it was quite difficult to remember each time the correct qtf codes.

I have also some empty pages problems, mostly when the current page is completely filled; no problems with tables, indeed....

I'll polist and post the package when I've a bit time for it.

I think it would be nice to make a complete QTF generator with it, but it would need a bit more work.

Ciao

Max
